

Python Lab Exercises – Task Tracker Project

Topics Covered: Comments, print(), Variables, Data Types, and input()

Instructions: Write a Python program for each exercise. Do **not** use loops, functions, lists, or conditional statements. Use only the concepts covered in class.

Exercise 1 – Welcome to Task Tracker

Write a Python program that:

- Displays a welcome message.
- Prints your name.
- Prints today's date.
- Add comments to explain your code.

Sample Output

```
=====
TASK TRACKER
=====
```

Welcome to Task Tracker

Student: John Smith

Date: 28-07-2026

Exercise 2 – Create a Task

Write a program that stores the following in variables:

- Task ID
- Task Name
- Priority

Display all the values.

Sample Output

Task ID: 101

Task Name: Design Login Page

Priority: High

Exercise 3 – Display Data Types

Create variables for:

- Task Name
- Task ID
- Estimated Hours
- Task Completed

Display both the value and its data type using type().

Sample Output

Task Name: Design Homepage

<class 'str'>

Task ID: 201

<class 'int'>

Exercise 4 – Employee Task Assignment

Ask the user to enter:

- Employee Name
- Task Name

Display the information.

Sample Output

Enter Employee Name: Alice

Enter Task Name: Create Dashboard

Employee: Alice

Assigned Task: Create Dashboard

Exercise 5 – Task Information Form

Ask the user to enter:

- Task ID
- Task Name
- Department
- Estimated Hours

Display the information in a formatted report.

Sample Output

=====

TASK INFORMATION

=====

Task ID: 105

Task Name: API Development

Department: IT

Estimated Hours: 8

Exercise 6 – Daily Work Log

Create variables for:

- Employee Name
- Number of Tasks Completed
- Working Hours
- Is Attendance Marked

Display all the details.

Sample Output

Employee: Rahul

Tasks Completed: 4

Working Hours: 8.5

Attendance: True

Exercise 7 – Project Registration

Write a program that accepts:

- Project Name
- Team Leader
- Number of Team Members

Display the project information.

Sample Output

Project Name: Student Portal

Team Leader: David

Team Members: 6

Exercise 8 – Task Summary Report

Create variables for:

- Task Name
- Assigned Employee
- Priority
- Due Date
- Status

Display a professional report.

Sample Output

=====

TASK SUMMARY

=====

Task Name: Testing Module

Assigned To: Neha

Priority: Medium

Due Date: 30-07-2026

Status: Pending

Exercise 9 – User Input and Data Types

Ask the user to enter:

- Task ID
- Estimated Hours

Convert the input into the correct data type and display:

- Value
- Data Type

Sample Output

Enter Task ID: 401

Enter Estimated Hours: 12.5

Task ID: 401

<class 'int'>

Estimated Hours: 12.5

<class 'float'>

Exercise 10 – Mini Task Tracker Registration

Write a complete program that asks the user to enter:

- Task ID
- Task Name
- Employee Name
- Department
- Priority
- Estimated Hours
- Completed Status (True/False)

Display all the details in a professional format.

Sample Output

```
=====
TASK TRACKER REPORT
=====
Task ID      : 501
Task Name    : Build REST API
Employee Name : Amit Kumar
Department   : Software Development
Priority      : High
Estimated Hours : 10.5
Completed    : False
=====
```

Bonus Challenge

Design a **Student Task Tracker** that collects the following information:

- Student ID
- Student Name
- Course
- Assignment Name
- Assignment Deadline
- Estimated Time (Hours)
- Assignment Submitted (True/False)

Display the information in a well-formatted report using only:

- Comments
- `print()`
- Variables
- Data Types
- `input()`

Note: Do not use `if`, `for`, `while`, lists, dictionaries, or functions. Only use the concepts learned so far.
